1. **Wall Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) structural concrete. Wall may also be constructed of any UL Classified **Concrete Blocks***.

See **Concrete Blocks** (CAZT) category in the Fire Resistance Directory for names of manufacturers.

2. **Stair Assembly** — Min 4-1/2 in. (114 mm) thick reinforced lightweight or normal weight (100-150 pcf or 1600-2400 kg/m³) structural concrete.

3. **Joint System** — Max separation between edge of stair assembly and face of wall (at time of installation of joint system) is 4 in. (102 mm). The joint system is designed to accommodate a max 15.6 percent horizontal compression or extension from its installed width. The joint system shall consist of the following:

A. **Forming Material*** — Min 4 pcf (64 kg/m³) mineral wool batt insulation installed in joint opening as a permanent form.

Pieces of batt cut to min width of 3-3/4 in. (95 mm) and installed edge-first into joint opening, parallel with joint direction, such that batt sections are compressed min 25 percent in thickness and that the compressed batt sections are recessed from top and bottom surface of the stair assembly as required to accommodate the required thickness of fill material. Adjoining lengths of batt to be tightly-butted with butted seams spaced min 24 in. (610 mm) apart along the length of the joint.
